radient360 Solutions: Our Story

The first company to achieve **low code** development and provide customized cloud-based digitization solutions to the North American Offshore Oil and Gas Industry. Quickly delivering clients specifically what they want, when they want it. We are your first step towards digitization using cutting edge emerging technical solutions to help clients meet their critical business needs. Our drive towards AI and machine learning creates an environment that solves current and emerging critical business needs, enabling us to provide unprecedented turnaround time.

Headquartered in St. John's, Newfoundland, and Labrador, we're located right in the hub of Atlantic Canada's offshore energy sector. With over 50 deployments and thousands of users in leading Fortune 500 companies, we enable faster communication, better decision-making capabilities, and unrivalled visual insights. By giving them unsurpassed value for their data, we have changed the way oil & gas companies operate.

Supporting Digital Transformation in Offshore Newfoundland and Labrador

The *radient360* suite of applications provides end-to-end digital asset performance solutions to address some of the biggest productivity and cost barriers in the oil and gas industry. Our 'Low Code' platform allows our out-of-box products to be tooled and configured in ways our clients had only dreamed before. Your policies and procedures are directly embedded into our applications, meaning all outcomes are cost-effective and regulatory compliant. The real-time functionality that comes with our cloud-based interface means no wasted time waiting around –the *radient360* suite empowers you to take asset management and integrity to a whole new level. Track performance, inspections, assessments, and reporting at a multi-site level, from anywhere in the world –all you need is an internet browser!

Assessment, inspection, management, and tracking of results take up a huge amount of time and effort. With the advent of more and more digital technology, the reliance on digital tools increases, especially at work, making arduous tasks easier. Strong automation tools and inspection software simplify daily activities and data collection, empowering clients, and service providers to take control of their processes. Digital inspection solutions are crucial for effective scope planning, risk assessment and preventive maintenance. Radient360 is focusing on standardizing asset management and inspection technology to provide clients with a holistic digital inspection solution to meet all field inspection requirements which includes time and risk-based inspection. The cloud-based software

application will incorporate simplified processes and real-time collaboration that can be accessed from anywhere with mobile and offline capabilities. The goal of this Digital inspection Solution is to enhance security, operational efficiency, and overall cost savings.

Integrating people, data, and work to create reliable efficient solutions

Through streamlined inspection, reporting and review processes, the *radient360* suite protects your most valuable assets from lost productivity and profit. As data, regions and regulatory requirements change from site to site, *radient360's* configurable products adapt quickly and easily to ensure our clients get the results they need. By digitizing your asset management strategy, *radient360* gives you standardized workflows and processes with optimized project costs.
